

SOLUTION

1. NTA Ans. (3)

Sol. Atomic radius of Ag and Au is nearly same due to lanthanide contraction.

2. NTA Ans. (18.00)

Sol. $4\text{NaCl} + \text{K}_2\text{Cr}_2\text{O}_7 + 6\text{H}_2\text{SO}_4$ 

(A)

(B)

↓

(C)

Total number of atom in A + B + C = 18

3. NTA Ans. (1)

Sol. Electronic configuration of

So third ionisation energy is minimum for Fe.

4. NTA Ans. (12.00)

ALLEN Ans. (18.00)

Sol.

Total Cr-O bonds = 6 Total Cr-O bonds = 12
($4\sigma + 2\pi$) ($8\sigma + 4\pi$)

Total number of bonds between chromium and oxygen in both structures are 18.

Note :- But answer of NTA is 12. They consider only linkages between Chromium and Oxygen but in question total no. of bonds are asked so σ and π bonds must be considered separately.

5. Official Ans. by NTA (2)

6. Official Ans. by NTA (4)

Sol. KMnO_4 will not give satisfactory result when it is titrated by HCl.

7. Official Ans. by NTA (2)

8. Official Ans. by NTA (3)

Sol. Option 1) Manganate $\Rightarrow \text{MnO}_4^{2-}$,Permanganate $\Rightarrow \text{MnO}_4^-$ 

After excitation

(2) $\text{MnO}_4^{2-} \Rightarrow$ green $\text{MnO}_4^- \Rightarrow$ purple/violet

(3) Manganate contains 1 unpaired electron hence it is paramagnetic

where as permanganate contains no unpaired electrons hence it is diamagnetic.

(4) Both have d^3s hybridisation hence both have tetrahedral geometry.
